

Project Iteration Routemap

The Iteration Route Map is a tool that identifies what functionality will be delivered in each iteration of a project. As the name suggests it acts as a map that project stakeholders can reference in order to anticipate how the application will develop throughout its lifecycle. The Iteration Route Map is primarily used by the **architect** and **development team** to manage *analysis and design* and *implementation* activities throughout the project but every team member and stakeholder will find value in reviewing it once completed. The template comes with instructions and examples.
